Technical and economic feasibility project

Hospital Center in Padova

The project concerns the construction of the New Hospital Center in the area Padova Est – San Lazzaro the hospital was born as a new strategic HUB of the regional health network and research center and excellence at the national level, to improve the quality of the care offered and the health of the population. The architecture draws its character from the dialogue with the green and the light of the Po plain, in the frame of the hills and mountains of Veneto conforming as a coherent set of formal and informal spaces on a human scale, for patients and hospital staff.
